RF INTERFERENCE NOTICE:

CABLE HARNESS PLACEMENTS AND GROUND STRAP ROUTING on this game have been designed to keep RF radiation and conduction within levels accepted by FCC regulations.

TO MAINTAIN THESE LEVELS, reposition harnesses and reconnect ground straps to their original placements if they should be disconnected during maintenance.

Installation

With legs attached to cabinet, proceed as follows:

1. Unlock and remove backglass from backbox.
2. Remove shipping insert and shipping blocks from insert door.
3. Unlatch and open insert door.
4. Unlatch speaker panel, disconnect speaker cable, and remove speaker panel. Close and latch insert door.
5. Reach into the cabinet pedestal hole and pull up the line cord. Insert the line cord into the notch in the cabinet pedestal. **DO NOT PLUG IN AT THIS TIME.**
6. Position backbox face-down on top of cabinet with neck opening facing rear of cabinet.
7. Pull five cable connectors from backbox.
8. Reach into pedestal hole of cabinet, pull up ground strap braid wire, and push it into backbox.

9. Remove ties securing cabinet and playfield cables and pull these cables up through pedestal hole.

10. Interconnect cabinet and playfield cables with those of backbox. All are same shape, size and color-coded:

General Illumination Connector: 6-Pin WHITE

Switch Connector: 15-Pin WHITE

Lamp Connector: 24-Pin WHITE

Solenoid Connector: 36-Pin BLACK

Cabinet Connector: 36-Pin WHITE

11. Push Remote Volume Control Cable (GRAY), terminated in a 4-Pin connector, and Transformer Secondary Harness, terminated in four connectors: 2-Pin WHITE, 6-Pin BLUE, 9-Pin WHITE, and 12-Pin WHITE into backbox.
12. Lift up backbox and position on cabinet pedestal, engaging brackets for support.
13. Secure backbox to cabinet using two bolts and related washers.
14. Connect ground braid, and WHITE-RED wire under wing nut and washer at bottom of backbox.
15. Guide Remote Volume Control Harness through harness clips on back of backbox and connect 4 Pin connector to Sound Board 10J4.
16. Connect Transformer Secondary cable connectors:
 - 6-Pin BLUE (7 wires) to 6-Pin WHITE (7 wires)
 - 12-Pin WHITE to Power Supply 3J1
 - 2-Pin WHITE to Power Supply 3J9
 - 9-Pin WHITE to Sound Board 10J1

Inspection

- A. Check all connectors in backbox for loose wire termination. Reseat any loose wires by pushing in on terminal.
- B. Push on all connectors attached to Master Display, CPU, Driver, and Sound Boards, and check terminations on capacitor and bridge rectifiers at lower right of backbox.
- C. Gently press on all socketed IC packages on CPU and Sound Boards.
- D. Check that two fuses on Sound Board and seven fuses on Power Supply Board are secure.
- E. Push on connector attached to Slave Display Boards.

- F. Check that line fuse in bottom of cabinet is secure.
- G. Check transformer input connector in bottom of cabinet for loose wire termination. Reseat any loose wires by pushing in on termination.
- H. Check cabinet to coin door connector for loose wire termination. Reseat any loose wires by pushing in on termination.

Power Turn-On and Game Setup

This machine MUST BE PLUGGED INTO A PROPERLY GROUNDED OUTLET TO PREVENT SHOCK HAZARD and to ensure PROPER GAME OPERATION. DO NOT use a "cheater" plug to defeat the ground pin on line cord, and DO NOT cut off ground pin. Line voltage MUST agree with that specified on the back of cabinet or serious damage to machine could occur. For low-line applications (105 or 210V ac), refer to the power wiring diagram.

- A. With the coin door closed, plug game in and turn it ON. Game should come on in Game Over mode as indicated by Player 1 score reading zero, Game Over lights lit, and High Score to Date alternating with player scores.
- B. If game comes on in the Diagnostic Mode (Credits display showing 04, Ball in Play Display showing 00, and Player 1 display showing game identification) turn game OFF and ON again.
 - 1. If game now comes on in Game Over mode, bookkeeping and game evaluation totals have been reset to zero.
 - 2. If game still comes on in Diagnostic Mode, open coin door and turn game OFF, and ON twice. This is an indication of batteries being removed with power OFF or coming loose during shipment. This has also resulted in features reverting to factory settings. Any changes from factory settings must be re-entered using procedures provided in Instruction booklet.
- C. If game still comes on in Diagnostic Mode, CPU board or memory-protect circuit may have failed.
- D. Place three balls on playfield next to outhole.
- E. Perform diagnostic tests and make any desired changes to features as described in Instruction booklet.

Location of Controls

Game Operation

Game Over Mode—Turn game ON; player 1 score shows 00; all player scores alternate the high score to date, Game Over lamp lights. All playfield lamps cycle in attract mode.

Credit Posting—Insert coins; sound produced, number of credits displayed. If maximum credits* exceeded by coin or high score to date, credits posted correctly and coin lockout de-energizes until remaining credits are below maximum. No credits may be won and coins are rejected while the coin lockout is de-energized.

Game Start—Push credit button; start-up tune played, ball served, credit display reduced by one player 1 up flashes until first scoring switch is made, ball in play shows 1. Pushing credit button before ball 2 is displayed allows additional players.

Bonus—Bonus is advanced (from 1,000 to 99,000) once by making A-B-C-D lanes, and for F-I-R-E-P-O-W-E-R targets when not lit, and three times for flipper return lanes when lit. Completing orbit shot scores 5,000 and three advances, or 10,000 and ten advances when lit for bonus holdover. Lighting A-B-C-D advances bonus multipliers (2x, 3x and 5x), and scores 25,000 points with 5x lit. Operating right flipper (Lane Change feature) alternates lit lanes.

Orbit Shot—Entering spinner lane and exiting orbit out gate completes orbit shot. Lighting F-I-R, E-P-O, or W-E-R lights individual jet bumpers for 1,000 points and Orbit Shot* arrow for ten seconds to award bonus holdover. Completing Orbit with bonus holdover arrow lit awards bonus memory for next ball. If bonus holdover has been awarded, Orbit scores 25,000 points.

F-I-R-E-P-O-W-E-R—Completing F-I-R-E-P-O-W-E-R:

- Lights one flipper return lane and spinner the first time
- Lights other flipper return lane the second time
- Lights Ramp Shot for Extra Ball the third time
- Lights FIREPOWER and one drain Special the fourth time
- Awards FIREPOWER special the fifth time
- Scores 50,000 points the sixth and succeeding times

Drain Specials will alternate by hitting kickers.

Ramp Shot—Completing Ramp Shot scores 5,000 or lit value (mystery or extra ball). Making right flipper return lane when lit lights ramp shot for Mystery value* (20,000 to 99,000) for seven seconds.

Multi-Ball—Making eject hole* scores 5,000 or lit value, and advances lit value, locks ball, and another ball is put into play. Hitting release target* scores

25,000 or lit value, advances lit value, and initiates two ball Multi-Ball. All scoring during Multi-Ball doubles except for the eject hole which scores 5,000 and ejects ball.

End of Game—If bonus holdover is lit at end of last ball the bonus and multipliers will score. Then same amount of bonus will score without multipliers to award bonus holdover. Match Digits* appear in ball in play display, credit* awarded for match. Exceeding High Score to Date awards three* credits. Match, High Score to Date, and Game Over sound made as appropriate.

DISPLAY BOARDS

Model C 8363 Master Display and 7-digit Slave Displays required.

Diagnostic Procedures

DISPLAY DIGITS TEST

1. Set AUTO-UP/MANUAL-DOWN switch to MANUAL-DOWN and depress ADVANCE. Displays should indicate all 0's.
2. Set the switch to AUTO-UP. Displays should sequence from all 0's thru all 9's. Comma segments should come on when odd digits are displayed.
3. To stop cycling, set switch to MANUAL-DOWN. Operate ADVANCE pushbutton to step through the tests one number at a time. Set switch to AUTO-UP to resume cycling.

SOUND TEST

1. From Display Digits Test depress ADVANCE with the switch set to AUTO-UP. Test 00 should be indicated in the Credits display and the Match display should sequence from 00 thru 06. Different sounds should be produced for 00, 01, 02, 03, and 04.
2. To continuously pulse a single sound, set the toggle switch to MANUAL-DOWN. Operate ADVANCE pushbutton to sequence through sounds one at a time. Set toggle switch to AUTO-UP to resume sequencing.

SOLENOID TEST

1. From Lamp Test depress ADVANCE with the switch set to AUTO-UP. Test 02 should be indicated in the Credits display. The Match display sequences from 01 thru 25. Corresponding solenoids 01 thru 24 are pulsed. Flipper relationship is de-energized with subtest 25.
2. To continuously pulse a single solenoid set switch to MANUAL-DOWN. Operate ADVANCE pushbutton to sequence through the solenoids one at a time. Set switch to AUTO-UP to resume sequencing.

 21—ORN-GRY—2P13-8, 8P3-28

2. Flipper button connections are as follows:

Right—ORN-VIO—2P12-1, 7P1-7
 Left—ORN-GRY—2P12-2, 7P1-9

3. Sol. 16 is Coin-Co part number

4. Typical wiring for solenoids and special switches follows:

**SWITCH TEST**

1. From Solenoid Test depress ADVANCE with the switch set to AUTO-UP. Test 03 should be indicated in the Credits display and any stuck switches in the Master display. As stuck switch(es) is displayed a sound is produced. The display continuously cycles through the stuck switches and as they are opened, the number is removed from the sequence. When all switches are open, the Match display is blank and the sounds stop.
2. If all switches in a row are displayed, first verify that all are open and then check for a short to ground on the row wire.
3. Operate switches; a sound is produced and switch number is momentarily indicated in the ball in play display. If two switches in a row are indicated with one switch closed, check for a short between the column wires; for multiple indication check column wire for short to ground. If two switches in a column are indicated with one switch closed, check for short between row wires.
4. If proper indications are obtained in Test 03 but matrix problem is suspected in game play, disconnect lamp connectors 2P5 and 2P7. Recheck game play. Perform CPU Self-Test if problem remains. If problem is cleared, check for short between lamp matrix and jet bumper mounting brackets.

- 7 - IC26 Game ROM 0 Faulty
- 8 - IC19 CMOS RAM or Memory Protect Circuit Faulty
- 9 - Coin-door closed, Memory Protect Circuit Faulty, or IC19 CMOS RAM Faulty.

Note that "0" remaining after power turn-on indicates CPU Board lockup.

SOUND BOARD SELF-TEST

Depress DIAGNOSTIC pushbutton on the top of the Sound Board. Several electronic sounds should be produced. This sequence of sounds is repeated until the game is turned OFF and back ON.

INITIATING AUTO-CYCLE MODE

1. Set AUTO-UP/MANUAL-DOWN switch to AUTO-UP and depress ADVANCE pushbutton. Test 04 is indicated in Credit display and Function 00 in Match Display.
2. Set switch to MANUAL-DOWN and depress ADVANCE to indicate Function 50 in the Match Display.
3. Set switch to AUTO-UP and operate Credit button to indicate 15 in Player 1 Display.
4. Depress ADVANCE pushbutton to start Auto-Cycle mode. Each cycle of this mode sequences thru the Display Digits Test, Sound Test (00), Lamp Test (01), and Solenoid test (02).
5. To terminate the test and return to game over, turn the game OFF and back ON.
